Fans of The Walking Dead will remember the character the TV show name is derived from, the sweet and adorable baby girl Clementine. In the first, the name and the first part of the episode title are out-of-order to suggest a . [...] [...] And I would like to search and sort my data by row of files in the same folder instead of sorting all (different) files in the folder. I can find something on how to do it with multiple columns with this code. `#!/usr/bin/awk -f NR==FNR{ a[$2]; next $4 in a { $1 in a; if(size==1) printf("%s", $1); else printf("%s%s", $1, ","); } } { $1 in a { printf("%s%s", $1, " "); $1 in a; if(size==1) printf("%s", $1); else printf("%s%s", $1, ","); } }` But when I try to change the order of the search strings by changing the `FNR==NR` line to `FNR==1` it give the error: `awk: Fatal: cannot open input file F1` `awk: Fatal: cannot open input file F1` I don't understand this since there's no "F1" file and no error. There's a similar problem with F2,... What I've tried: 1. I've created an empty file F1. But then it generates a `can't open input file F1` error. 2. I've tried different

number in the $FNR = NR$ line. It always generates the error
